COOPERATIVE CIRCUIT ADVENTURE

COPPER & COIL

Two robots. One bright idea.

Restore a forgotten power station together. Rewire its logic, watch the electricity flow, and bring every chamber back to life.

1-2 PLAYERS

ONLINE + SHARED KEYBOARD + SOLO

Six playable chambers

An original miniature workshop built around the joy of a circuit that finally works.

Make the connection. Together.

ACTUAL GAMEPLAY

01 READ THE MACHINE

An understandable goal: both inputs, exactly one, neither, or a safety interlock.

02 SHARE THE WORK

Copper changes one bank. Coil changes the other. Talk through the signal path.

03 TEST EVERY CASE

A live truth table checks every input combination. A lucky switch setting is not enough.

04 BRING IT TO LIFE

Both robots commission the circuit on separate pads, then cross the powered bridge.

WHAT IS PLAYABLE TODAY

Six small machines. Six bright ideas.

01 **It takes two**
AND: both generators must run.

02 **A little resistance**
AND + NOT: A on, B off.

03 **One or the other**
XOR: exactly one generator.

04 **The quiet hours**
OR + NOT: power when both are off.

05 **On the same wavelength**
XOR + NOT: inputs must agree.

06 **The last light**
Two mixers: exactly one input, plus safety C.

IN THIS BUILD

- Online rooms and two assigned robots
- Shared keyboard or solo switching
- Live wires and truth-table testing
- Undo, reset, hints and chamber selection
- Original art and six sound cues
- Windows and browser builds

All six circuits use the same workshop layout.

A clear hook. A focused next step.

THE HOOK

The pleasure of redstone-style logic, made into a friendly two-player puzzle adventure. Electricity gives immediate feedback; the robots make cooperation visible.

AUDIENCE HYPOTHESIS

Pairs who enjoy reasoning aloud, building little machines, and a calm shared sense of discovery. This is a positioning hypothesis, not a sales forecast.

NEXT MILESTONE - PROPOSED

A funded vertical slice with distinct spatial chambers, movable modules and richer routing; co-op puzzle playtests; save/resume; gamepad support and platform invites.

PARTNERSHIP DISCUSSION

Development funding, player research, positioning and launch support. Budget, team and schedule need to be scoped with the owner after the demo is evaluated.

READY TO EVALUATE

Six playable circuits and an included guided walkthrough. Automated native and WebAssembly checks cover every chamber, player authorization, shared undo and snapshots. No external player study or production budget is claimed.
